

# Identity and Access Control Standard Operating Procedure

This SOP establishes the guidelines for access controls to production servers and critical database infrastructures.

Access is granted on the principle of least privilege. All users must authenticate via Multi-Factor Authentication (MFA).

Password requirements: Passwords must be at least 12 characters long, containing uppercase, lowercase, numbers, and special characters.

Accounts will be locked after 5 failed login attempts. Suspended accounts must be verified by the Security Operations Center (SOC).
